MATURITY AGE	17 months ♀ / 14 months ♂		
INTERVAL BETWEEN CALVINGS	473 days		
PRODUCTIVE LIFE	10.7 years		

MEAT PRODUCTION PERFORMANCE

AVERAGE DAILY GAIN	1.192 kg	SLAUGHTER AGE	270 days
FEED CONVERSION RATE	5.07	SLAUGHTER WEIGHT	209.4 kg

MEAT YIELD: 60%

Livestock
Genetics
from
Spain

Rubia Gallega

- These animals are medium-sized, well-proportioned, with the straight profile and conformation characteristic of this meat breed.
- The coat of animals of this breed is uniformly light colored, allowing for centrifugal degradation. There are variations between light and dark colors, which are known as marella and bermella, respectively, and white spots and hairs of other coat color are not allowed.
- The Rubia Gallega breed is a meat breed and is characterized by interesting reproductive and productive parameters: early maturity, prolificacy, short calving interval, high milk production (the cow is able to milk twins), ease of calving (less than 2% dystocia), as well as good maternal qualities and calm temperament.
- Standard commercial products are calves slaughtered at 10 months of age or less; calves slaughtered between 10 and 18 months of age; and fattening calves slaughtered between 18 and 30 months of age. As an indicator of quality, the breed is included in the protected geographical indication "Ternera Gallega".
- The Rubia Gallega breed is used in industrial crossbreeding with Holstein breed, Morucha breed (Morucha), Avilena Negra Iberica.

The Avilena-Negra Iberica breed

PROLIFICACY INDEX: 3			
AGE AT FIRST CALVING: 32 months			
BIRTH RATE	0.9/year		
MATURITY AGE	16 months ♀ / 15 months ♂		
INTERVAL BETWEEN CALVINGS	405 days		
PRODUCTIVE LIFE	12 years		
MEAT PRODUCTION PERFORMANCE			
AVERAGE DAILY GAIN	1 kg	SLAUGHTER AGE	700 days
FEED CONVERSION RATE	6.2	SLAUGHTER WEIGHT	286.7 kg
MEAT YIELD: 57%			

The Avilena-Negra Iberica breed

- Uniform black coat, with black nose or white border and black mucous membranes. Horns are blue-black or white with black tips. The hooves are slate gray or black.
- Sexual organs with developed testes, udder is regular shaped, well proportioned and smooth, nipples are symmetrical. The scrotum is black.
- Head with broad, slightly concave forehead, straight and elongated profile in females, broad muzzle.
- Strong, short, well muscled and powerful neck in bulls and slender in females. Upper edge straight in cows and convex in bulls, horn band reduced and interrupted.
- The withers are broad and well connected to the neck and the body. The back is long and broad, well muscled and upright. The back has a horizontal dorsal lumbar line. Straight, broad and muscular loin.
- Strong and well-proportioned limbs. Correct conformation allowing an easy and free gait.
- Average weight of adult cows is 500-600 kg and 800-1000 kg for bulls.
